---

Descriere: An X-ray diffraction (XRD) device equipped with a high-temperature chamber. The XRD system will be mainly used in analysis of bulk steel and powder samples. The system will be operated by the Center of Microscopy and Nanotechnology (CMNT). Besides metallurgy, it will be utilized also in other fields of science and technology e.g. ceramic material and thin film research, geosciences, and chemistry. Note. Additional information on the notice is in the Tarjouspalvelu.fi supplier portal. You will find a direct link to additional information on the notice from this Hilma notice. <https://tarjouspalvelu.fi/oulunyliopisto/?id=32607&tpk=f3025501-e278-42d2-b2cf-91cd1043d927>
