Descriere: Market Dialogue regarding Innovative Solutions for Greenhouse Gas Emission Reduction through Sorting and Treatment of Garden and Park Waste. Randers Municipality, as part of the "Circular Economy Beyond Waste" network, received EU funding to develop and implement an innovative tender that can contribute to the effective reduction of greenhouse gas emissions during the treatment of collected garden waste (GW). It is Randers Municipality's hope and ambition that through this project, the municipality can contribute to the development of solutions and technologies that can significantly reduce the negative environmental impact of sorting and treating GW. Randers Municipality has not pre-determined the solutions and technologies that may be part of the market dialogue, the potential uses for GW, or how a future tender should be organized and conducted. Therefore, the project is referred to as "GW-to-X". As part of this project, Randers invites interested suppliers of industry-relevant solutions and technologies to participate in market dialogue. Randers Municipality is open to discussing both existing solutions and solutions in development. For further information please see the document Basis of dialogue uploaded in Ethics.
