

Procurement - construction of a 132 kV power pipeline - Klovning - Haugaland NÅ|ringspark

I.D.: 88865561

Data publicarii	03.11.23	Coduri CPV	45231400
--------------------	----------	------------	----------

Descriere: Fagne AS shall construct a new 132 kV power line between Klovning transformer station and a new transformer station in Haugaland NÅ|ringspark. Parts of the existing 66 kV power line Klovning-Spanne and 22 kV power line Klovning-Apeland must be altered in connection with the establishment of the power line. The power line will be approx. 5.34 km and consists of two sub-sections. The first sub section is approx. 0.76 km (M1-M5) and shall be constructed as a two course powerline in double course steel masts with one top line (OPGW). On this section the existing 66 kV power line Klovning-Spanne and 22 kV Klovning-Apeland shall be altered. The other sub section is approx. 4.58 km (M6-M22) and shall be constructed as a one course powerline with portal masts of creosote impregnated round wood masts and steel traverses with two top lines (1x alloyed Feral no. 53 Goll and 1xOPGW). Fagne AS will deliver the wood masts that shall be used on this section (M6-M22). The start of the contract is estimated to 2.5.2024, with an expected completion dated 15.09.2025.
