Descriere: MLCT-BIO-DC "MLCT-BIO-DC low thermal sensitivity version of the probe that is available for heated applications that can cause probe bending or drift. These drift-compensated probes have a small laser-reflection enhancing gold pad, constrained to the distal end of the cantilever, to significantly reduce probe bending (patent pending). Unmounted, Pack Size 10, COMANDA pentru 1 CUTIE (per comanda). Pret per cutie de 10 pcs" Bruker AFM Probes 10 pcs 6 2,500.00 lei 15,000.00 lei MSNL-10 " Bruker's Sharp Microlever (MSNL) probes are the industry standard for high-performance imaging with TappingMode in fluid. The MSNL cantilever layout is identical to that of the other MLCT products, with an "A" cantilevers on one side of the probe, and "B," "C," "D," "E," and "F" cantilevers on the other side of the probe. See the cantilever orientation diagram here. All cantilevers on the MSNL probes have <2 degrees of cantilever bend, making them ideal for use on all Bruker and non-Bruker AFMs. Unmounted, Box of 10 pcs. COMANDA pentru 1 CUTIE (per comanda).
