Pretul estimativ: 15.000,00 RON - 15.000,00 RON

Descriere: Transiluminator cu sistem de fotodocumentare microDoc/ microDOC System with UV Transilluminator (UVTS254/365) - CSL-MDOCUV254/365 • Digital camera with high-sensitivity CMOS sensor • Image visualised within a large colour monitor • Light weight compact hood with easy access door and built-in inner lights • Safety switches disconnect the UV source when the easy access door is opened • Description • The MicroDOC is the researcher's choice for a simple ultra-compact gel documentation system that meets constraints in both budget and space within the laboratory. A large screen enables images, including agarose and fluorescent gels, colorimetric gels, autoradiography film and blotting membrane, to be captured in colour, clearly and easily. The system is computer-free and supplied with a storage card and 55mm ethidium bromide filter as standard, while an optional SYBR filter is also available. Files are saved onto the storage card in RAW, TIFF-RGB and JPEG formats and may be transferred to computer for analysis with the highly recommended TotalLab software
