Pretul estimativ: 1.380,00 RON - 1.380,00 RON

Descriere: Conditii refuzate: sticla bruna cu dop rodat de 500ml pentru colectarea probelor de apa. cu dop din sticla. gat larg NS45/40 gat ingust NS24/29 it can be autoclaved but in a controlled process. All the glass endures 500C^o if they are slowly heated and slowly cooled down. resistant to thermal shocks, nevertheless the manufacturer of the glass tubing recommend not to use a difference of temperatures higher than 120^o C to avoid thermal shock. This means even though the glass resists to temperatures of 500^oC, it cannot resist if we put the material inside an oven at 500^oC forcing it to go from 20^oC to 500^oC in seconds. The same happens if we have it in an oven at 500^oC and we take it out and put it on the table at 20^oC. In these cases, there is a thermal shock that can cause breakage. The way to avoid thermal shock is to heat the material slowly and cool it slowly.
