Descriere: The purpose of this call for tenders is to enter into a contract with a supplier that can assist the customer in the daily work of supporting, operating and developing the customers content management system (TYPO3), as the customer needs to supplement the customer's internal IT department with external staffing. The supplier shall assist the customer with the following non-exhaustive list of tasks: Upgrades, development and maintenance of existing plugins, 3rd technical support and debugging, advice on security issues, consultancy concerning overall technical architecture, compliance related tasks, documentation, development and version-upgrading. The customer therefore wishes to enter into a contract with a supplier who can offer a wide number of consultants/developers who have the necessary experience in working with TYPO3, as the customer will often use the supplier for tasks which the customer either cannot solve the tasks, or if the customer does not have sufficient resources to solve the tasks themselves. The estimated value of the contract is based on the maximum duration of the contract including the option for prolonged duration. Since the customer assesses that division of the contract into sub-contracts will not give the best solution in commercial terms, this contract is not divided into sub-contracts. The contract may be used by the customer, which is entitled, but not obliged, to use the contract.
