-----------------	----------	------------	----------

Descriere: St. Olavs Hospital shall procure 1 mobile x-ray apparatus for use in the Orthopaedic, Rheumatology and Skin Diseases Clinic. The apparatus shall mainly be used for back surgery and elective surgery in hips and knees. The equipment shall be able to transfer pictures to our Sectra PACS. The offered equipment is therefore required to fulfil the requirements for DICOM protocols and accept DICOM Modality Worklist. Pictures that are taken ought to be documented on the printer and via USB. It is a prerequisite that the equipment can be made compatible with the most usual platforms for navigation. Tenders are thus also wanted for 3D and motorised C-arm movement, i.e. all software and hardware that must be in the delivery for later upgrades. Provision of the required training for all personnel who work in the affected units must be included in the delivery. Tenders are wanted for a complete mobile C-arm including a printer and separate monitor trolley. Information is wanted on whether the system can have slave monitors, either directly on the C-arm or on the wall/ceiling stand. It has been decided that equipment shall be procured with flat detector technology. The contracting authority requests that options are offered in the tender for up to 2-two- equivalent apparatuses as an option for a period of up to 3-three- years from when the contract is signed for the contract object in this notice.
