Descriere: Nuclear Medicine Imaging and Archiving System. Installation services of imaging equipment. System maintenance services. Software implementation services. Training services. The Nuclear Medicine department at the Royal Liverpool University Hospital (RLUH) currently uses a Hermes system to perform image processing and secondary storage of all of its nuclear medicine and associated hybrid imaging scans. The current contract for this service expires in September 2015. We would like to consider acquisition of the necessary, software and hardware along with the necessary maintenance, training and implementation arrangements over a 5 year term. As part of this new contract we would be looking to upgrade and enhance this system to reflect recent developments in technology and the requirements of our clinical and research caseload.
