Descriere: The aim of the procurement is to replace the current agreement on technology for remote patient monitoring that covers Oslo municipality's need for alternative treatments for digital patient monitoring of inhabitants with chronic diseases, mental illnesses, cancer and lifestyle diseases. There shall be a low-threshold offer that shall raise the quality and increase the efficiency associated with following up these groups. The agreement supports the municipality's goal of increasing safety, mastery and activity in patients, and specifically goes on needs for safeguarding their own health, following up and supporting patients at a distance, as well as preventing and early detecting worsening of physical and mental health conditions. The new contract will apply to all inhabitants who have existing, new or changed needs that are covered by technology for digital remote patient monitoring.
