Descriere: Nottinghamshire and City of Nottingham Fire Authority is inviting expressions of interest from suitably qualified and experienced organisations interested in being invited to tender for the Multi Activity Contract for planned, preventative and reactive maintenance services required to maintain the Authority's Estate. The Authority's estate comprises of 27 sites which include Head Quarters, whole time and retained fire stations along with training blocks and training towers. A list of all sites will be provided by Faithful+Gould upon request to the in-tend tendering portal, details in section I.1. The services consist of planned, preventative and reactive maintenance of mechanical and electrical service installations and building fabric across the Authority's Estate, including services ranging from, but without limitation to, asbestos inspections through to the repair of valves and taps. The Multi Activity Contract will be a 3 year contract with the option of extending for an additional 2 years. Estimated Value is — planned maintenance between 300 000-450 000 GBP per year and reactive maintenance 100 000-250 000 GBP per year. It is anticipated that the size of the Multi Activity Contract may result in the chosen Provider having a full time presence across the Estate from Monday to Friday during the Authority's working day, to carry out planned and preventative maintenance. Reactive maintenance will be dealt with on an ad hoc basis to carry out works that will be defined within the contract.
