Descriere: The framework agreement includes two main categories of vehicles, technical forensics and prisoner transport. The categories cover various sizes and configurations as further described for each sub area. The contract's financial limit is NOK 150 million. With the exception of vehicles ordered when the contract is signed, there is no obligation to buy the contracting authority. In total, police districts and special bodies at the turn of the year 2023/24 state that the real need in the police for renewal of the fleet within these two main categories corresponds to 87 cars divided in the six sub areas, for the period 2024 - 2027. However, police districts' options to make planned procurements are limited at the time of publication of the agreement. The contracting authority will therefore enter into a framework agreement so it is possible to carry out relatively quick call-offs, if the financial scope for investments in the vehicle fleet opens up in the future.
