Descriere: Remote sensing delivers multi-modal and -temporal data from the Earth s surface. In order to cope with these multi-dimensional data sources and to make the most out of them, image fusion is a valuable tool. This book aims at streamlining data selection, application requirements and the choice of a suitable image fusion technique. It forms a practical guide into all aspects involved in remote sensing image fusion: Definitions, levels, processing requirements, techniques, quality and applications provide an overview and give insight into this field. It is based on the collection of successful image fusion cases that are relevant to many different disciplines."
