Descriere: The procurement includes, among other things, the establishment of conveying paths for a 132 kV earth cable connection on parts of the stretch between Hemmingstad and Flotmyr transformer stations. The cable route will mainly consist of a cast pipe package. Constructional adaptations shall also be made in the transformer stations and facilitated for the establishment of joint pits and introduction to the transformer stations, as well as adaptations to the existing conveying roads carried out at Rogaland County. In addition distribution networks and joint services shall be established as stated in the coordination model. The procurement also includes some options. This includes replacing and re-establishing existing street lights along parts of the route, altered pipe package when crossing Karmsundgata, option price for low carbon concrete in altered pipe packages, as well as re-establishment of natural stone binders.
